ALFRED NOBEL

Alfred Nobel was born on October 21, 1833 in Sweden. His important invention was dynamite – a powerful explosive. This dynamite business made him a very rich man.

One day, Alfred Nobel read about his death in a newspaper. In fact, it was his brother's death. The reporter called him a salesman of death, "The dynamite king". Nobel was very upset. He had invented dynamite to save lives – lives that were lost because other explosives were dangerous to use. He hated violence and war. And he did not like the world to think of him as a man of war.

He thought of the best way for people to use his fortune for years. Finally he knew what to do with his fortune. Alfred Nobel established the Nobel Prize, an annual award to honour leaders of science, literature, and world peace. Alfred Nobel died on December 10, 1896. He was unmarried and had no children. His important decision changed the way the world thought of him. He was remembered the way he wanted: Alfred Nobel, man of peace.

Pierre Curie was born in Paris, where his father was a general medical practitioner, on May 15, 1859. He received his early education at home before entering the Faculty of Sciences at the Sorbonne. He gained his Licentiate in Physics in 1878 and continued as a demonstrator in the physics laboratory until 1882 when he was placed in charge of all practical work in the Physics and Industrial Chemistry Schools. In 1895 he obtained his Doctor of Science degree and was appointed Professor of Physics. He was promoted to Professor in the Faculty of Sciences in 1900. He advanced theories of symmetry with regard to certain physical phenomena and turned his attention to magnetism. He showed that the magnetic properties of a given substance change at a certain temperature – this temperature is now known as the Curie point. Curie's studies of radioactive substances were made together with his wife, whom he married in 1895. They were achieved under conditions of much hardship barely adequate laboratory facilities and under the stress of having to do much teaching in order to earn their living. They announced the discovery of radium and polonium in 1898 and later they did much to elucidate the properties of radium its transformation products. Their work in this era formed the basic for much of the subsequent research in nuclear physics and chemistry. Together they were awarded half of the Nobel Prize for Physics in 1903 on account of their study into the spontaneous radiation discovered by Becquerel, who was awarded the other half of the Prize. In 1905 he was elected to the Academy of Sciences.
